

Yuntaa.com - Online Storage and Back-Up

Online storage services are a dime a dozen. Which one is the best? Yuntaa would like to think it is. This Belgian company backs up your data on secure and safe servers; they use the same security measurements that the world's most powerful governments use. Yuntaa has sharing capabilities; it lets you share your files with any number of friends. There are extra tools for organizing music and photos—photo album, slideshow manager, audio playlists and you'll even get a personal Yuntaa blog. Stream your videos, send links to your files to your buds, and get organized with Yuntaa's Video Manager, easily accessed via the Yuntaa Desktop. Customize your desktop however you like. Free accounts allow 1GB of storage space. Paid accounts start at 20 euros for 5GB for a duration of 90 days; an Ambroisaa account is 60 euros and the duration is one year. Eurphoriaaa accounts can be customized however you like.

In their own words

"Yuntaa™ means alternative. An alternative way to backup, store, share and access everything you have on your computer today. We created Yuntaa™ so that you will have an alternative way to work with all the stuff you have on your computer and do so much more with it than you could if it stayed where it was today. And all this using one simple tool."

Why it might be a killer

As an increasing amount of media is collected on our PC's storage becomes a major question. Some people use CD's or external drives. These of course are liable to get lost or damaged. Online storage, on the other hand means you'll get access whenever and wherever. Your files are more secure and they can be shared and organized. Yuntaa is secure and it doesn't lack in features. Sharing capabilities are unlimited and their management tools are easy enough for anyone to use.

Some questions

Yuntaa is entering a heavily saturated space. There are so many similar online storage and back up services, it's hard to distinguish between them. Will users find the 5GB, 90 day storage option for 20 euros pricey? Are the management tools as intuitive as Yuntaa claims? How good is the support?
